

Shaping outcomes through early intervention

Early intervention plays a pivotal role in shaping long-term outcomes for children with mobility challenges. Introducing the right posture control walker at the earliest appropriate stage supports not only physical development but also social participation and confidence.

By encouraging upright alignment, efficient gait patterns and independence in daily routines, early use of the Kaye Walker can reduce compensatory habits that are harder to address later in life.

This means creating opportunities for children to engage more fully at home, in school and within their communities and laying a stronger foundation for functional independence as they grow.

Height-adjustable
Grows with the user

Lightweight & foldable
From just 3.0 kg

7 size options
From early years
to adulthood

Long-term support
Spares, manuals and
accessories available

Clinical Benefits & Evidence

Why clinicians trust the Kaye Walker

Supports Upright Posture: rear-positioned frame encourages extension and natural trunk alignment

- Using of the Kaye Walker is associated with reduced trunk, hip and knee flexion, promoting a more upright posture than anterior designs.^{1 2}
- A more upright gait improves visibility, interaction and overall walking quality

Proven Clinical Outcomes

Trusted by NHS services and therapists for over 40 years

Promotes Gait Patterning

Facilitates heel strike and reciprocal stepping, instead of shuffling

Improves Efficiency and Endurance

- In gait-lab trials, the Kaye Walker reduced oxygen cost per metre walked, enabling users to walk further with less effort¹
- Even where oxygen cost differences were neutral, users still preferred the Kaye Walker, highlighting its comfort and acceptability³

Supports Natural Movement: posterior positioning frees the upper body, allowing better step length, shorter double-support, and more symmetrical gait cycles^{2 4}

Activates Muscle Groups:

encourages hip extension, ankle dorsiflexion and core control

Built for Real Environments:

works in schools, clinics, therapy settings and home use

Customisable Setup: wheel kits, hand grips, forearm supports, and hip guides to match user needs

Therapist-Led Design: built with clinicians, prioritising functional goals

The Superior Alternative to Anterior Walkers

Users with cerebral palsy who use posterior frames benefit from an upright posture with improved trunk and hip extension, which helps to:

- Reduce energy demands and delay fatigue
- Encourage efficient, reciprocal stepping with shorter double-support
- Support longer periods of walking and greater participation in daily activities

Backed by Family & Clinician Preference: across studies, children and parents consistently preferred the Kaye Walker, citing stability and a more “natural” walking appearance^{2 3}

Case Evidence

- **Child with spastic diplegia (GMFCS II):** Transition from anterior to Kaye Walker resulted in upright posture, reduced fatigue, and improved classroom participation²
- **10-child gait lab trial:** Kaye Walker users showed lower oxygen consumption and cost, enabling longer-distance walking with reduced effort¹
- **Parent feedback:** Families strongly favoured posterior walkers for comfort, stability, and walking appearance^{2 3}

Practical Clinical Notes

- **Handle height:** Adjust to wrist crease for optimal alignment; incorrect setup can negate postural benefits⁵
- **Acclimation:** Postural and efficiency gains improve after a familiarisation period¹
- **Outcome tracking:** Document velocity, step length, double-support, and PCI/oxygen cost to evidence benefit in practice

Summary

The Kaye Walker is more than a mobility aid.

It is an **evidence-backed** intervention that supports upright posture, improves efficiency and **enhances participation**.

Its consistent acceptance by children and families makes it the posterior walker of **choice** for clinicians seeking to maximise independence and quality of life.

Key Features Overview

Every detail of the Kaye Walker has been engineered to support posture, independence and long-term durability

Seven size options, each paired with a specific colour for easy identification:

- W½
- W1
- W2
- W3
- W4L
- W4H
- W5

W4L - Light | W4H - Heavy Duty

WALKER

	Height with Standard Wheels	Height with Activity Wheels	Hand Grip Width	FRAME		
				Width	Length	Weight
W½	37 - 46 cm	N/A	34 cm	58 - 60 cm	52 - 59 cm	3.00 kg
W1	41 - 55 cm	45 - 59 cm	34 cm	60 - 62 cm	56 - 62 cm	3.00 kg
W2	48 - 64 cm	52 - 68 cm	34 cm	58 - 60 cm	69 - 83 cm	3.85 kg
W3	59 - 78 cm	63 - 82 cm	38 cm	62 - 64 cm	77 - 89 cm	4.85 kg
W4L	72 - 92 cm	76 - 96 cm	40 cm	65 - 67 cm	84 - 97 cm	5.50 kg
W4H	81 - 100 cm	N/A	40 cm	67 - 69 cm	90 - 102 cm	7.00 kg
W5	90 - 105 cm	94 - 109 cm	47 cm	65 - 67 cm	102 - 108 cm	9.75 kg

USER	W½	W1	W2	W3	W4L	W4H	W5
Max Weight (kg)	27	27	39	60	82	95	113
Height (cm)	up to 95	91-122	107-137	129-152	150-179	150-185	175-192

Frame & Structure

- Rear-positioned for upright gait
- Rigid aerospace-grade aluminium frame
- Seven sizes from paediatric to adult

Everyday Practicality

- Folds flat easily for transport/storage
- Sturdy, yet lightweight (from 3.0 kg)
- Easy-clean finish and low maintenance

Adjustability & Growth

- Handle height adjustment
- Stability maintained at taller settings
- Tailoring frame and support structures to match the user's individual anthropometry, gait pattern, and clinical needs

Accessory Compatibility

- Built-in mounts for hip guides, belts, harnesses, seats, gutter arms

Accessories

Tailored Support. Clinical Flexibility.

Hip Guide (with or without belts)

Supports the hips to encourage correct alignment and improve sitting or standing posture

Hand Grips

Provide a comfortable grip while promoting correct hand placement

Anti Perching Loop

Prevents user from sitting on the frame, encouraging standing

Soft Sling Support

Gives gentle support under the pelvis to help users move more smoothly across different floor surfaces

Gutter Arms

Provide upper-limb support for users who need extra help with balance or trunk stability while walking

Seat Kit & Cushion

Secures rest platform
Folds away when walking

Universal Anti-Tip Bars

Prevent the frame from tipping backwards

Rear Wheel Dampeners

Add rear-wheel resistance to promote steady gait speed and improve stability while walking

Removable Control Handle

Allows a carer or therapist to guide and steady the walker, providing additional safety and reassurance during training or early walking stages

Keep an eye on our continuously expanding range of accessories! All are available to purchase **separately** and **compatible** with previously supplied products.

Wheel Options

The Kaye Walker offers flexibility for both **indoor and outdoor use**, with a choice of standard or activity wheels to suit different environments. The **standard** configuration is ideal for schools, clinics and home settings, providing smooth mobility even on carpet, while the **activity wheels** are designed for outdoor surfaces such as tarmac, grass and gravel.

Fixed front wheels allow precise control when swivel movement is not required and **directional locking swivel** wheels can be adjusted for stability or manoeuvrability as needed. The standard rear wheels include a **one-way** bearing to prevent backward rolling and are suitable for most everyday surfaces.

For users who require more versatility, the **activity wheel set** features larger front and/or rear wheels for smoother travel over uneven surfaces. All legs are paired, securely fitted with spring poppers, and clearly marked for correct placement, ensuring optimal stability and performance.
